Website Admin Guide

How to manage your site content, images, PDFs, videos, and chat widget

This guide covers all the features built into your admin panel. Each section explains where to find the feature, how to use it, and how to verify it on the live site.

Your admin panel is located at /admin on your website. Log in to access all of these tools.

1. Show / Hide Any Section

Every section on every page can be toggled on or off without deleting anything. This is useful when you want to temporarily remove a section or if content isn't ready yet.

In the Admin

1. Go to Pages and pick any page (Home, Resources, About, etc.)
2. You'll see all the sections listed. Each one has an eye icon toggle next to it.
3. Click the eye to hide a section. Click again to bring it back.
4. Changes take effect immediately on the live site.

On the Live Site

- Hidden sections don't render at all. No blank space, no broken layout.
- Toggling a section back on restores it exactly as it was. Nothing gets deleted.

2. Adding Images to Any Section

Every section across the entire site supports an optional image. You can add photos, illustrations, or graphics to enhance any section visually.

In the Admin

1. Go to Pages, pick a page, and click into any section.
2. Scroll down to the bottom. You'll see four image fields:
 - Section Image — click Upload to choose from your computer, Library to pick a previously uploaded image, or paste a URL directly.
 - Image Alt Text — a short description of the image (helps with accessibility and SEO).
 - Image Caption — optional text that displays below the image.

- Image Layout — controls how the image sits relative to the section text.

Layout Options

- Featured — below text: Full-width image underneath the section content.
- Featured — above text: Full-width image above the section content.
- Article — image left, text right: Side-by-side layout with the image on the left.
- Article — image right, text left: Side-by-side layout with the image on the right.

Removing an Image

To remove an image and go back to the original text-only look, click the X button next to the image preview thumbnail, then hit Save.

On the Live Site

Visit the page where you added the image. You'll see it rendered in whichever layout you chose. Try different layouts to see what works best for each section.

3. Chat Widget (Prosperity Planning Concierge)

There's a chat bubble in the bottom-right corner of every page, connected to your Copilot Studio bot.

What Visitors See

- After about 4 seconds, a tooltip appears: "Have questions? Connect with our Prosperity Planning Concierge"
- The tooltip stays visible until the visitor manually closes it or opens the chat.
- The chat connects in the background as soon as the page loads, so when they click the icon, the welcome message is already there. No waiting.
- The chat panel has your logo, branded green and gold colors, and a clean professional look.

How to Test

1. Load any page on the site.
 2. Wait a few seconds for the tooltip to appear. Confirm it stays visible.
 3. Click the chat icon. The greeting should show up immediately.
 4. Send a message and verify the bot responds.
 5. Close and reopen the chat to make sure it still works.
-

4. Downloadable Guides — Viewable PDFs

On the Resources page, the "Featured Guides" section is now fully active. Each guide is a clickable link that opens a PDF in a new browser tab. Right now they all point to the Privacy Notice as a placeholder until you

upload the real guides.

How to Upload PDFs

1. In the admin, go to Pages > Resources.
2. Find the Downloadable Guides section and click into it.
3. Each guide has a Guide Title field and a PDF File field.
4. Click Upload PDF next to whichever guide you want to update.
5. Select a PDF from your computer (max 10MB). It uploads automatically.
6. Hit Save at the top.

You can also paste a URL directly into the PDF field if the file is hosted elsewhere. Each guide can have its own unique PDF. Use the Add Guide Item button to create new guides, or the arrow buttons to reorder them.

On the Live Site

1. Go to the Resources page and scroll to "Featured Guides."
2. Hover over any guide — you'll see the title highlight and "View PDF" appear.
3. Click it. The PDF should open in a new browser tab.

5. Educational Videos — Now Linkable

Also on the Resources page, the video list now supports clickable links. Each video can point to YouTube, Vimeo, or any other video platform.

How to Add Video Links

1. In the admin, go to Pages > Resources.
2. Find the Video List section and click into it.
3. Each video has a Video Title and a Video URL field.
4. Paste the YouTube or Vimeo link into the URL field.
5. Hit Save.

You can add new videos with the Add Video Topic button, remove them, or reorder them with the arrows.

On the Live Site

- Videos with a link appear as clickable rows. Hover to see "Watch" appear, click to open the video in a new tab.
- Videos without a link show as dimmed with a "Coming Soon" label until you add one.
